

FOT-Net data

Amsterdam, March 19th 2014

Roberto Brignolo/ roberto.brignolo@crf.it / Centro Ricerche Fiat

The logo for FESTA, consisting of the word "FESTA" in white capital letters on a dark blue triangle.

FESTA

FOT-Net is a support action co-funded by the European Commission to network FOT activities at European, national and international level.

FOT-Net data

Expectations

- Proposal for Standardisation of the data acquisition and storage process with technical solutions

Offers

- CRF is not a partner, but please keep us informed, eventual participation in the discussion as associated stakeholder

FOT-Net data

Data Sharing benefits

- Avoid useless re-acquisition of already available data. This is general.
- For consolidated systems OEMs are really interested in evaluation analyses results. If there is a professional chain able to produce these results they can rely on them.
- For new systems OEMs should participate to new data collection but, when lucky, existing data may provide important information in the impact evaluation

Data Sharing obstacles

- Legal/privacy aspects
- It is difficult to re-use data if this has not been planned since the beginning and if acquisition do not cover more than the specific needs –
 - How to overcome:
 - Standardized definition of which data with which characteristics to collect
 - Standardized format and tools
 - Solutions for data download
